

## EXAMPLE: Traffic Reduction Proposal

The broken red line above shows the 'rat run' currently being used by motorists in order to avoid traffic lights on Southampton Way (see red map pins) and a one way system around Cottage Green.

The Rainbow Street Residents' Association proposes that a barrier should be built across Coleman Road at the end of Rainbow Street (see yellow map pin). This would dramatically reduce through traffic in a residential area with narrow roads and on-street parking. It would also significantly reduce risk to children attending St George's Primary School (marked on the map).
